GENERAL APTITUDE

SPEED TIME DISTANCE-I

Speed:

Speed of an object is the distance covered by it in a unit time interval.

1 hour | 1 sec

500 m → 25 sec | 100 km → 2 hours

$\frac{500}{25}$ | Speed = ?

20 m → 1 sec

20 m/sec

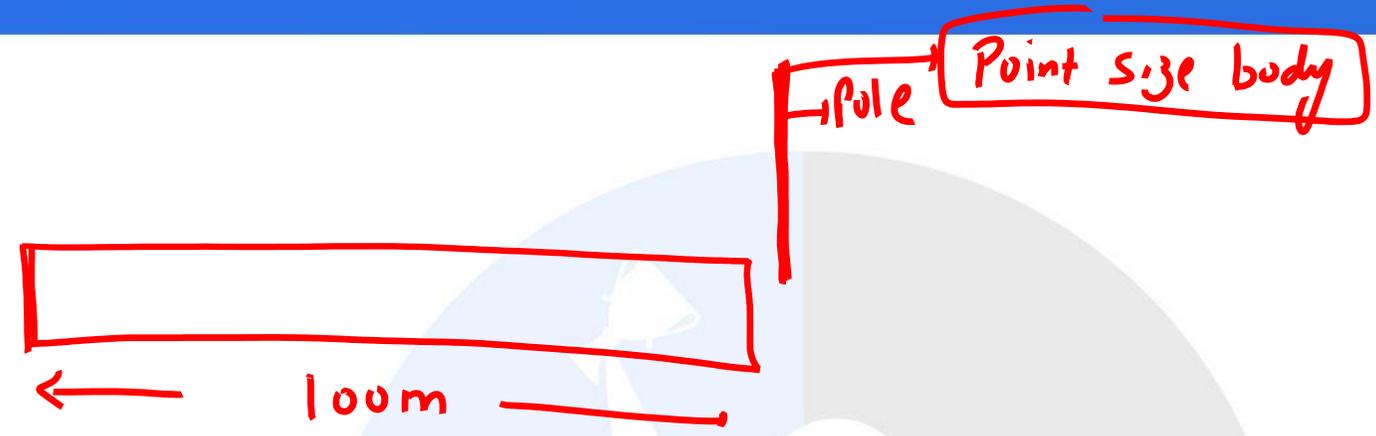

50 km → 1 hour

$$\text{Speed} = \frac{\text{distance}}{\text{time}}$$

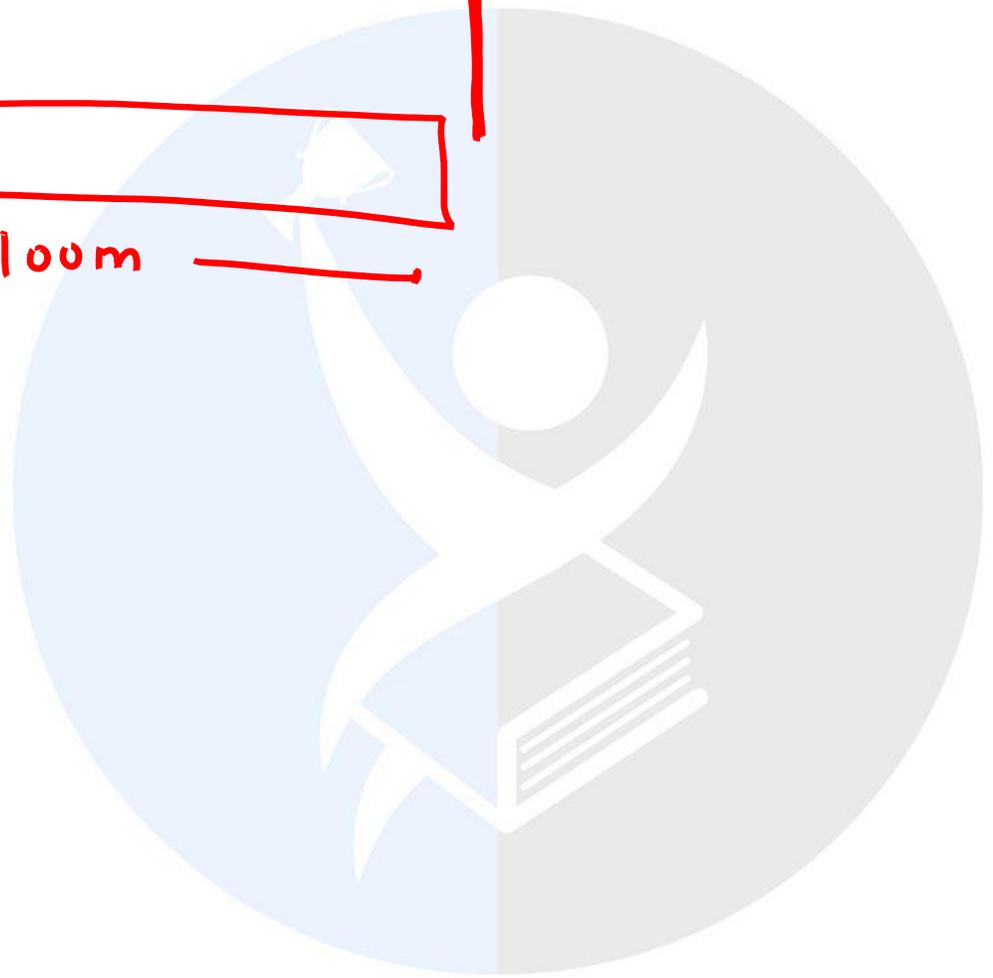

m / sec
 km / hours

km/hr or m/sec

①

②

Train crossing an electric pole:

$$S = \frac{d}{t}$$

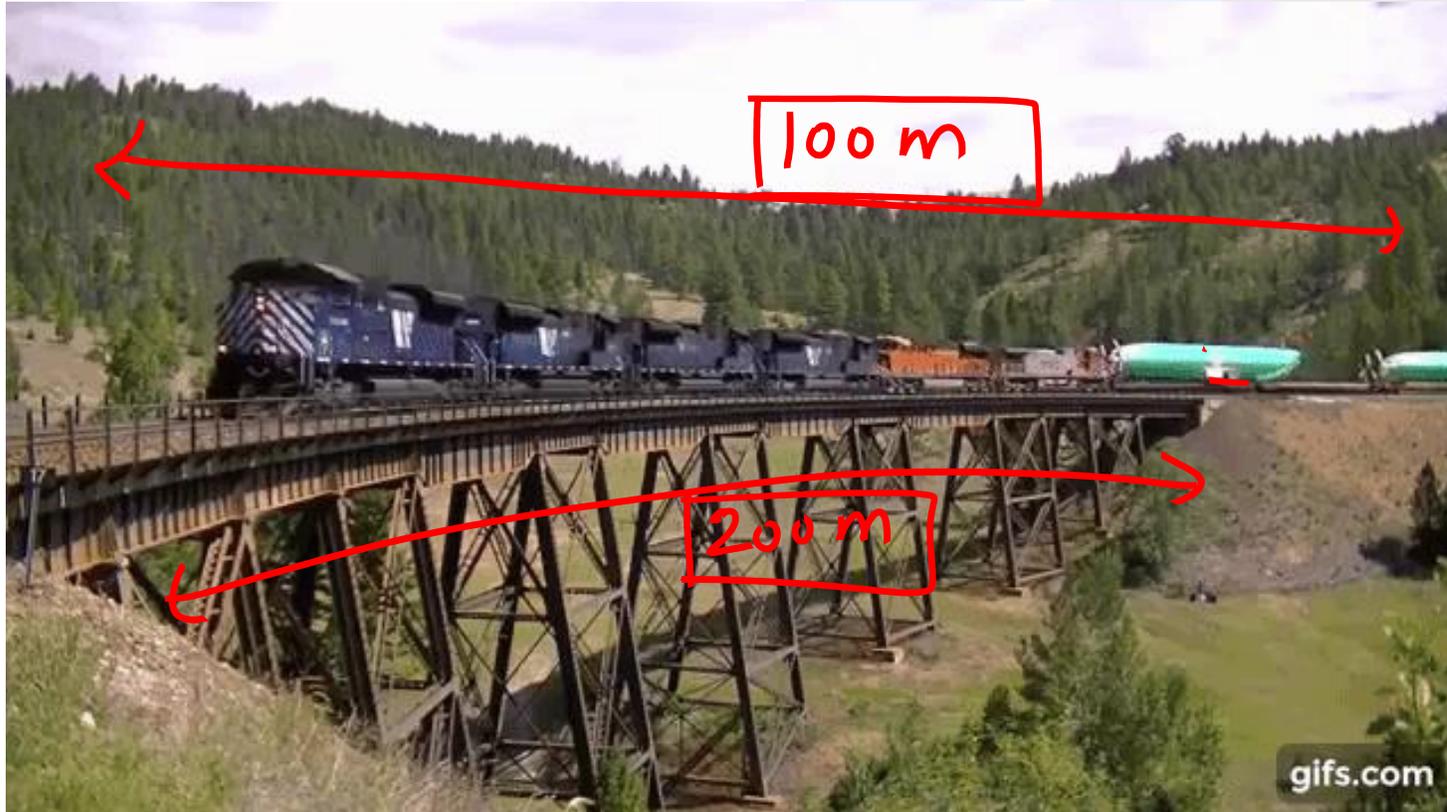

$$t = \frac{\text{distance}}{\text{Speed}} = \frac{\text{length of train}}{\text{Speed of train}}$$

$$\text{length} = 200 \text{ m}$$

$$S = 20 \text{ m/sec}$$

$$t = \frac{200}{20} = 10 \text{ sec}$$

Train crossing a bridge:

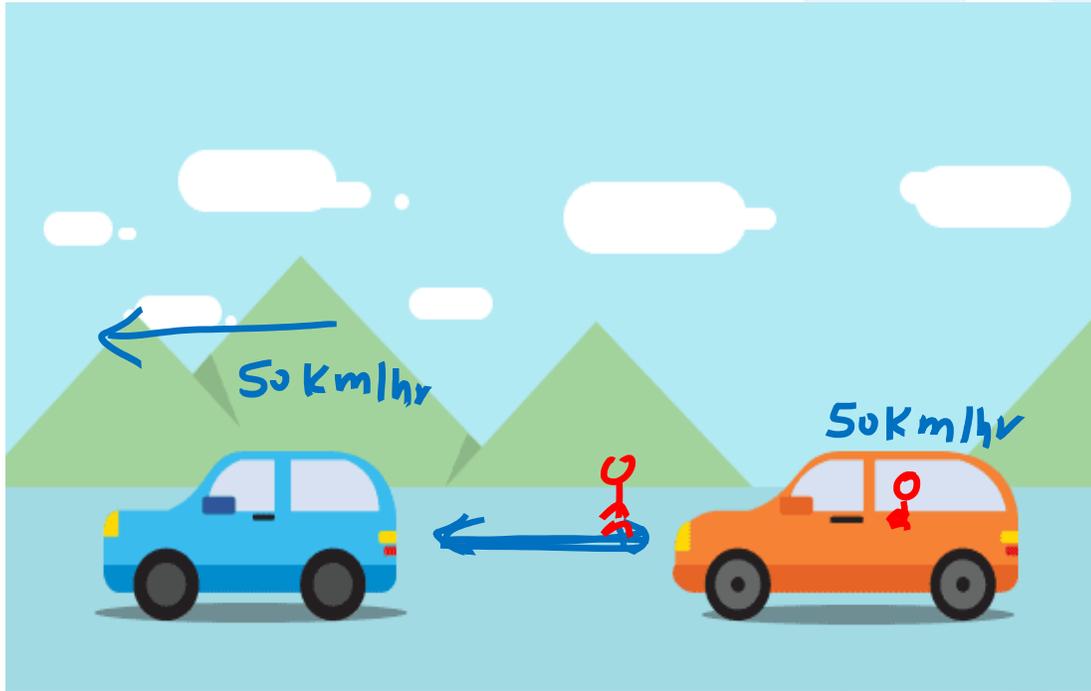

$$\begin{aligned} \text{distance} &= 100 + 200 = 300 \text{ m} \\ t &= 15 \text{ sec (Assume)} \\ \text{Speed} &= \frac{300}{15} = 20 \text{ m/sec} \end{aligned}$$

Relative speed:

Imp?

with respect to

The speed of an object w.r.t the another object.

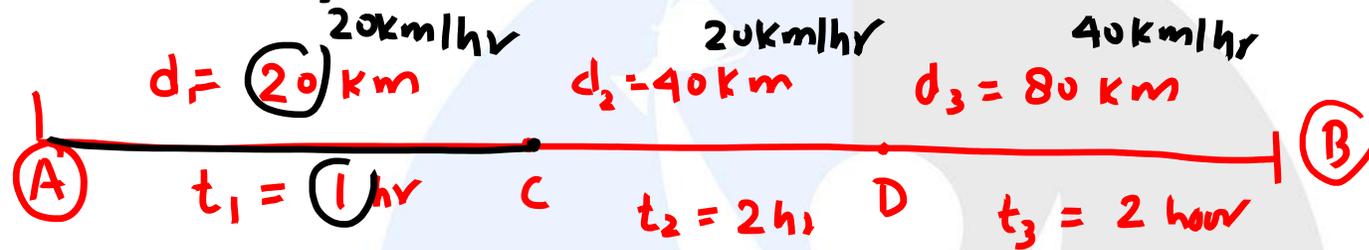

$$\text{Relative speed} = 50 - 50 = 0 \text{ (Same Direction)}$$

① When objects are in **Same direction**
 R. speed = $(S_1 - S_2)$ $[S_1 > S_2]$

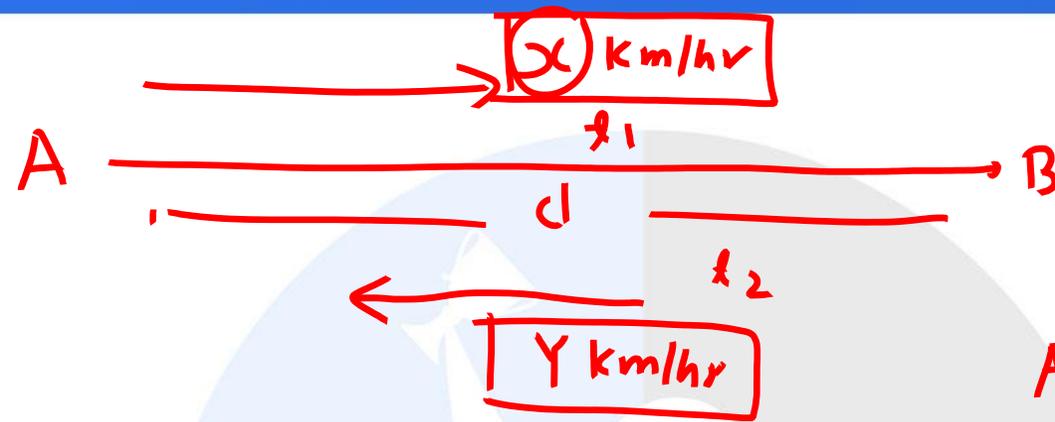

② When objects are in **opposite direction**
 R. speed = $(S_1 + S_2)$

Average speed: The average speed of an object is the distance travelled by the object divided by the duration of the interval.

Average Speed =

$$\begin{aligned}
 & \frac{\text{Total distance travelled}}{\text{total time taken}} = \frac{d_1 + d_2 + d_3}{t_1 + t_2 + t_3} \\
 & = \frac{140}{5} = \boxed{28 \text{ km/hr}}
 \end{aligned}$$

$$\text{Average speed} = \frac{2xy}{x+y}$$

$$\text{Avg. speed} = \frac{d+d}{\frac{d}{x} + \frac{d}{y}}$$

$$\frac{2d}{d \left[\frac{y+x}{xy} \right]} = \frac{2xy}{x+y}$$

Conversions:

i. To convert speed from km/hr to m/s

$$A \text{ km/hr} = (A \times 5/18) \text{ m/s.}$$

$$\boxed{\times \frac{5}{18}}$$

$$72 \text{ km/hr} \rightarrow \overset{4}{\cancel{72}} \times \frac{5}{\cancel{18}} = 20 \text{ m/sec}$$

ii. To convert speed from m/s to km/hr

$$B \text{ m/s} = (B \times 18/5) \text{ km/hr.}$$

$$\boxed{\times \frac{18}{5}}$$

(CC)

$$25 \text{ m/sec} \rightarrow \overset{5}{\cancel{25}} \times \frac{18}{\cancel{5}} = 90 \text{ km/hr}$$

$$\left(\frac{\text{km}}{\text{hr}} \right) = \frac{1000}{3600} \left(\frac{\text{m}}{\text{sec}} \right)$$

$$\left(\frac{\text{km}}{\text{hr}} \right) = \left(\frac{\text{m}}{\text{sec}} \right) \times \frac{5}{18}$$

$$\left(\frac{\text{m}}{\text{sec}} \right) = \left(\frac{\text{km}}{\text{hr}} \right) \times \frac{18}{5}$$

A 75m long train is running at 54 km/hr. In how much time will it cross an electric pole?

(1) 25 sec (2) 20 sec (3) 15 sec (4) 5 sec *Ans*

$$S = \frac{54 \text{ km/hr} \times 5}{18} = 15 \text{ m/sec}$$

$$d = 75 \text{ m}$$

$$t = \frac{d}{s} = \frac{75}{15} = 5 \text{ sec}$$

A 415 m long train is running at 63 km/hr. In how much time will it cross a tunnel 285 m long?

- (1) 40 sec (2) 50 sec (3) 60 sec (4) 70 sec

$$d = 415 + 285 = 700 \text{ m}$$

$$s = \frac{63}{18} \times \frac{5}{2} = \frac{35}{2} \text{ m/sec}$$

$$t = \frac{700 \times 2}{35} = 40 \text{ sec}$$

A train crosses a bridge and a platform of length 450 m and 700 m in 20 sec and 30 sec respectively. Find the speed of the train.

- (a) 25 m/s (b) 26 m/s (c) 25.5 m/s (d) 27 m/s

Ans $S = \frac{l + 450}{20}$ (Bridge) $S = \frac{l + 700}{30}$ Platform

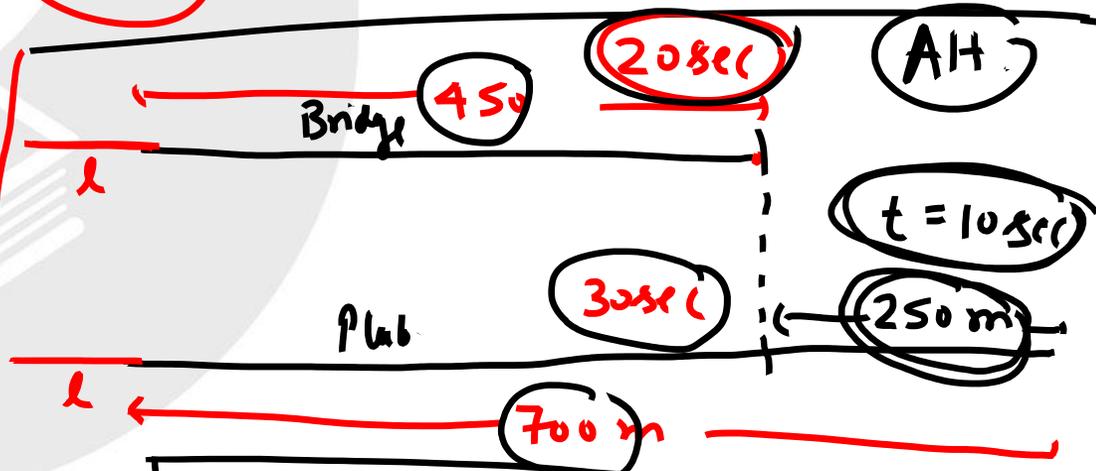

$S = \frac{500}{20}$

$\frac{l + 450}{20} = \frac{l + 700}{30}$

$3l + 1350 = 2l + 1400$

$l = 50$ m

Speed = $\frac{250}{10} = 25$ m/sec

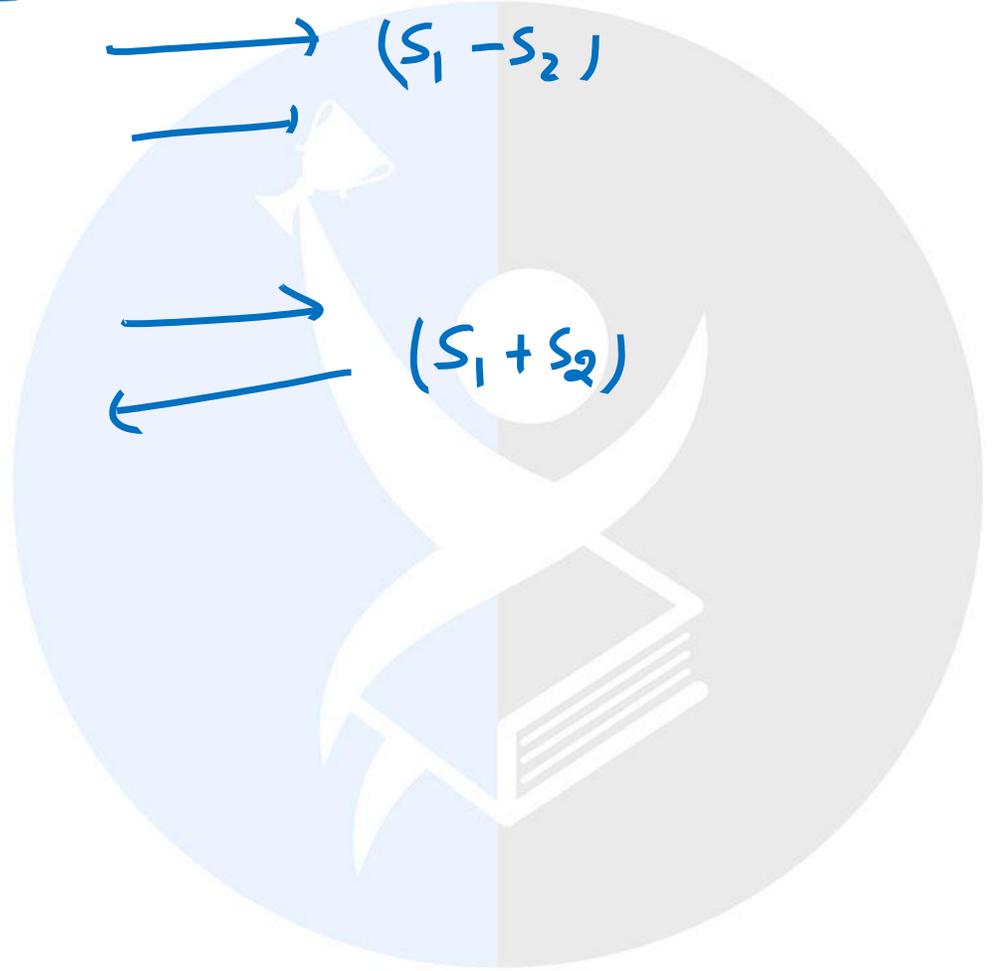

Bridge 450m 20sec Alt

Platform 700m 30sec t = 10sec 250m

Speed = $\frac{250}{10} = 25$ m/sec

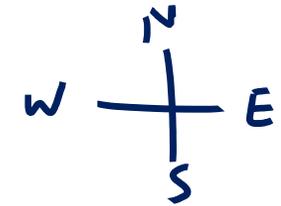

RELATIVE SPEED:

0 Two train started at (7) AM from the same point. The first train travelled north at a speed of 80 km/h and the second train travelled south at a speed of 100 km/h. The time at which they were 540 km apart is _____ AM.

(A) 9 (B) ~~10~~ (C) 11 (D) 11.30

$$R \text{ speed} = 80 + 100 = 180 \text{ km/hr}$$

$$d = 540$$

$$t = \frac{540}{180} = 3 \text{ hours}$$

10:00 AM

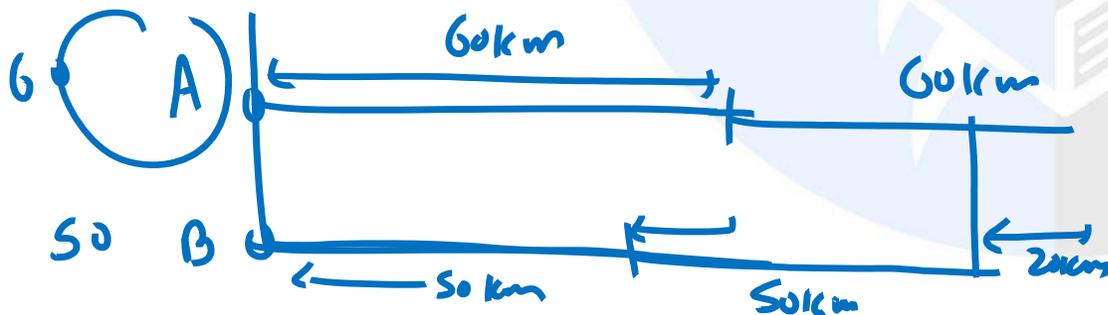

Two cars start at the same time from the same location and go in the same direction. The speed of the first car is 50 km/h and the speed of the second car is 60 km/h. the number of hours it takes for the distance between the two cars to be 20 km is _____.

(A) 1 (B) 2 (C) 3 (D) 6

$$R.\text{speed} = 60 - 50 = 10 \text{ km/hr}$$

$$d = 20 \text{ km}$$

$$t = \frac{20}{10} = 2 \text{ hours}$$

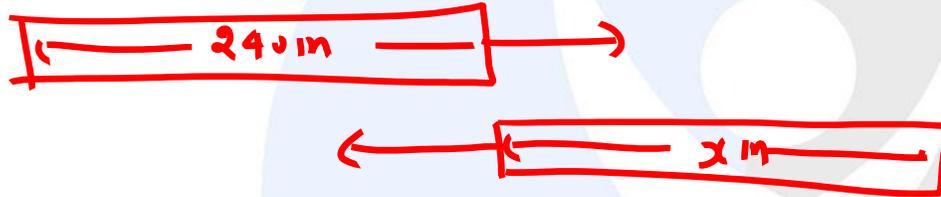

* Train A with length 240 m is running in opposite direction towards Train B and cross each other completely in 10 seconds. If the sum of speed of both trains is 198 kmph, then Find the length of Train B (in m).

(a) 240 (b) 310 (c) 540 (d) 360

Ans

$$d = S \times t$$

$$(240 + x) = 55 \times 10$$

$$x = 550 - 240$$

$$\boxed{x = 310} \text{ m}$$

$$R. \text{ speed} = \frac{198 \text{ kmph} \times 5}{18} = 55 \text{ m/sec}$$

$$d = (240 + x) \text{ m}$$

$$t = 10 \text{ sec}$$

○ A train 100m long takes 9 seconds to cross a man walking at 5 km/hr in the direction opposite to that of the train. Find the speed of the train.

(1) 55 km/hr (2) 45 km/hr (3) 25 km/hr (4) 35 km/hr

$$\text{R. Speed} = \frac{100}{9} \times \frac{2}{5} = 40 \text{ km/hr}$$

$$(S + 5) = 40$$

$$S = 35 \text{ km/hr}$$

A train crosses a man, who is running in the same direction of train at the speed of 2m/sec in 10 seconds . The same train crosses a tunnel in 54 seconds . If speed of train is 72 km/h then what is the length of tunnel?

- (a) 850 m (b) 800 m (c) 900 m (d) 750 m

Ans

$$R \text{ speed} = 20 - 2 = 18 \text{ mps}$$

$$t = 10 \text{ sec}$$

$$d = 18 \times 10$$

$$l = d = 180 \text{ m}$$

$$72 \times \frac{5}{18} = 20 \text{ mps}$$

$$20 = \frac{180 + x}{54}$$

$$1080 = 180 + x$$

$$x = 900 \text{ m}$$
